

Waste disposal Policy

The disposal of waste is very important, with the following instructions to be strictly followed.

Asbestos

The disposal of asbestos will not be carried out by the company's staff, but will only be disposed of by contractor licensed to remove and dispose of asbestos.

PCB

The disposal of PCB will not be carried out by the company's staff, but will only be disposed of by a contractor licensed to remove and dispose of PCB.

Tungsten lamps and fluorescent tubes

The disposal of tungsten lamps and fluorescent tubes will be planned for each contract, and where needed, a site crusher will be provided together with a site waste container.

Otherwise lamps will be stored in coffins and collected by a waste disposal contractor to dispose of the waste in accordance to current legislation.

Lamps other than tungsten (i.e. low and high pressure sodium, mercury etc)

These lamps will be disposed of strictly in line with the manufactures instructions.

Non Toxic Waste

The disposal of non-toxic waste will be planned for each contact, and if required a site skip will be provided. Alternatively the waste will be transported back to the depot and placed in the depot skip. A waste disposal contractor will be employed to dispose of the waste in accordance to current legislation.

Burning of waste materials

It is the company's policy that no waste will be burnt.

Disposal of oil

The disposal of oil will be planned for each contract, with the oil being placed in suitable containers.

A waste disposal contractor will be employed to dispose of the oil in accordance to current legislation.

Use of toxic materials E.g. Fluxes and cleaning solvents

Wherever possible the usage of toxic materials will be kept to a minimum by the selection of green alternative materials. Where this is not possible, staff will be trained on the usage of products containing toxic material.
